

There are 4 short practical courses to help keep healthier and happy fish in your aquarium.

### **Setting up your first aquarium**

This is a short 2-hour course aimed at those who have never set-up or kept tropical or cold water fish before.

You will be introduced to the different types of aquariums, filters, lighting and the species of fish and invertebrates to keep in your new aquarium.

### **Aquarium Water Chemistry**

This is a 2-hour short course aimed at those who have attended the Setting up your first aquarium and want a better understanding of the chemistry in fish keeping.

Water is the environment in which our fish live so the better the water quality the longer and happier the fish will be.

### **Setting up a planted aquarium**

This is a 4-hour course aimed at those who already keep fish and want to keep healthy plants in their aquarium.

You will be introduced to the various substrates and their uses, also the different plants available and their requirements, you will also be introduced to the various CO<sub>2</sub> systems and how to make your own reactor.

### **Setting up your first marine aquarium**

This is a 4-hour course aimed at those who have kept tropical fish before and want the challenge of setting up and keeping a marine aquarium.

You will be introduced to all the hardware required also the water conditions required for keeping a healthy environment.

We will also cover fish, corals and invertebrates for your aquarium.
